

BLOOD

Blood Is a Specialized Connective Tissue Which Is Fluid in Nature and Flows Through Our Body. Blood carries all essentials and do all communications in need.

*****What Kind of Connective Tissue Is Blood? 1. Lose 2. Liquid 3. Dense

Amount: Adult Male Contain 5-6l And Adult Female Contain 4-5l. Roughly We Carry the Amount of Blood Which Is 7-8% Of Our Body Weight. More or less both of it causes multiple difficulties for individuals.

***** how much blood a 70kg male have?? a.4.9-5.6l b. 3.8-4.1l c. 6.0-6.9l(a is right)

Origin: Red Bone Marrow

Fate: Spleen

Lifespan: 120 days. So, 120 days new blood cells are in your body.

Process Of Blood Production Is Called Hemopoiesis and Breakdown of Blood Is Called Hemolysis.

****Luna: 1. Where Do We Find It? Soft, Spongy Tissue Inside Bones. Origin: formation site Fate: Place to Dump After Destroy

Composition: 1. Plasma: Yellowish Liquid Part. Carries Water, Nutrition, Waste, Hormones.

2. Red Blood Cells: Red Because Of Hemoglobin. Carries Oxygen and Carbon dioxide. Physicians Called It Erythrocyte.

3. White Blood Cells: Fights Germs and Keep Us Healthy. Leucocytes.

4. Platelets: Stops Bleeding by Making Blood Clot. Thrombocytes.

*****function Matching slide

Plasma: Water: 90-92%

Protein:7% Roughly

Others:1%**** Hormones, Vitamins, Sugars, Salt, Fats and Waste.

Protein That Floats in Plasma Is Called Plasma Protein.

1.Albumin (The Helper) Carries Medicine, Fatty Acids, Hormones and Keep Water.

Formation: Liver

2.Globulin (The Defender) Fight Infection and Includes Antibodies (Immunoglobulins)

Formation: Liver and Immune Cells

3.Fibrinogen (The Clot Maker) Convert into Fibrin and Make Clot and Eventually Bleeding Stops.

(Make Funny Figures)

*****Question Answer Slide

Functions: Guess the Function. Add random functions include those explain before and make a circle kind of action slide.

Want To Know More About Blood?

It Is Red in Color Due to Presence of a Protein.

Hemoglobin: Protein in Red Blood Cells. Two Parts. Heme And Globin. Add Figure.

Source: Mostly Foods Are Enough. Iron, Vit B, Vit C, Hydration, Rest, Repeat.

Ex: Red Meat, Poultry, Fish, Beans, Leafy Green Vegetables, Dairy.

***** Pictionary

Types: Hb A: Adult Type, Major Part.

Hb A2: Adult Type, Minor Part.

Hb F: Fetal Type.

Want to know about what carries blood??

It's called blood vessels. They are three types.

1. arteries: which carries oxygenated blood from heart to whole body. Exception is pulmonary arteries which transport deoxygenated blood from heart to lung.
2. veins: which carries deoxygenated blood from whole body and drain into heart. Exception is pulmonary vein which carries oxygenated blood from lung to heart.
3. capillary: network between arteries and veins and do spontaneous exchanges.

That journey of blood throughout our body is called circulation. Circulation of blood from heart to all systems is named systemic circulation. Circulation from heart to lung and again back to heart is called pulmonary circulation.

***** fun fact: 1 red blood cell takes 20-60 seconds to roam the whole body and drain back to heart.

So now u know about blood, its quantity, functions, composition and also circulations.

Happy learning...
